

Design for Healthy Aging: Solution Across the Continuum of Care

September 30, 2020

The Workshop

In this one-day intensive workshop, expert faculty will share current physical, mental and societal challenges posed when individuals age, discuss programming and design interventions that can assist people (and their care givers) with those challenges, and present case studies and examples that integrate architecture, design and technology into healthy, safe living environments.

Faculty and attendees will explore gaps in the current system, (certainly exposed and exacerbated by the current pandemic) and consider the latest in design thinking for healthy aging in various settings across the continuum of care. Thought leader presentations, case studies and panel discussions will identify state-of-the-art best practices and possible new solutions. Attendees will have opportunities to pose questions to workshop faculty and interact with fellow attendees in fun and innovative ways.
