

Behavioral Health

Strategic Design Innovations that Improve Treatment Outcomes, Safety and the Bottom Line

A Pebble-In-Practice Workshop

Challenged by behavioral health issues? Planning or renovating a facility?

Don't miss this affordable, high-return day – a unique opportunity to learn from experts, idea-share with colleagues and re-charge your professional batteries to prepare you for today and tomorrow's behavioral health challenges.

What role can the built environment play in solving the dire and growing mental health and substance abuse crises? What impact do your design decisions have? Are you making use of the best and latest design solutions?

Design is making a difference **in the lives of children and adults** faced with these conditions, **in the safety of the staff** who treat and care for them, and **in the financial and legal challenges** faced by providers.

Join us for this one day interactive, collaborative, problem-solving workshop where design, facility and care professionals will offer lessons learned and new thinking in design strategies that support improved care for behavioral health.

What You'll Learn

You'll hear from behavioral health facility design thought leaders who will share real world experiences and future-looking insights into:

- The implications of your design decisions
- Innovative and effective design strategies that support behavioral health populations
- Case studies of state-of-the-art facilities
- Existing standards and behavioral health models
