

Building Blocks—New Design Strategies and Solutions for Pediatric Settings

Agenda

The Workshop

Join us for this one-day interactive, collaborative, problem-solving workshop intended to enable project stakeholders (designers, facility executives, administrators, care providers) to employ physical design strategies and methodologies that support improved care for children. Nationally acclaimed faculty will present pediatric specific evidence-based design best practices and case studies that integrate architecture, design and technology with innovative medical practice to create high-quality, high-tech care in a safe and enriching environment. Attendees will also share questions and ideas with the faculty and fellow attendees through interactive panel discussion.
