

Behavioral & Mental Health: Design for Supportive and Responsive Care Settings

May 23, 2024

The Workshop

The behavioral and mental health crisis continues to grow at alarming rates and is affecting individuals from all ages, ethnicities, and socio-economic positions. These challenges reach far beyond the traditional behavioral health unit into a myriad of care settings. It is imperative that these settings respond to complexities of care, are flexible to respond to fluid care needs, and offer safety and equity to patients and staff.

To meet the increased demand for care, improve care settings, and enhance staff safety, today's design, facility and care professionals have to advance their understanding of the environment's impact on behavioral health care and learn how to incorporate the best and latest design solutions throughout all healthcare settings.

This one-day virtual workshop provides the latest in design thinking for a variety of behavioral health care settings and offers state-of-the-art best practices through thought leader presentations, case studies, and panel discussions. Attendees will have opportunities to pose questions to workshop faculty and interact with fellow attendees.
