Solving a Healthcare Challenge

70% of inpatient suicides occur by hanging.
53% of deaths involve a door.

Time can make the difference between saving and losing a life in a behavioral setting. If a patient barricades their door, staff have a short window of time to access the room and prevent the individual from harm. Unfortunately, many doorsets in behavioral environments don't provide emergency access, so staff may be unable to open the door to help a patient in time.

Swiftstop Anti-Barricade Doorset with Wireless Full-Door Ligature Alarm & Ligature Resistant Bathroom

Solution

We're dedicated to preventing patient suicides and have worked closely with healthcare professionals and patients to design our Anti-Barricade Doorset with Full-Door Ligature Alarm.

Our Full-Door Ligature Alarm turns the entire door into a weighing scale. A wireless suicide detection system alerts clinical staff if a **vertical load of over 11 pounds** is applied anywhere on the door. Once staff are alerted to the incident, our Anti-Barricade Doorset provides emergency access **in just 2 seconds**.

Product Release Date:

- Swiftstop, Anti-Barricade Doorset launched in 2016
- Full-Door Ligature Alarm launched in 2018

Anti-Barricade Doorset with Full-Door Ligature Alarm can be designed to suit your facilities' color palette

Full-Door Ligature Alarm can detect ligature risk when the door is in the open position

Features

- Fastest on the market, providing emergency access **in just 2 seconds**
- Collapsible Anti-Barricade Doorstop that can be operated from a position of safety
- Combined Full-Door Ligature Alarm addresses ligature risk at all heights when the door is opened or closed - saving lives
- Nightingale Gold Award Winner 2022

Evaluation and Success

We are continuously gathering customer feedback to ensure we're adapting our products to meet the needs of staff and patients. For our Anti-Barricade Doorset with Full-Door Ligature Alarm, customers shared that our ligature alarm would only alert staff when it was in the closed position, which was a risk as inpatients could still ligature if the door were open. So we redesigned our doorset to address ligature risk in both opened and closed positions.

Full-Door Ligature Alarm can detect ligature risk when the door is in the closed position
